

Forecast, demand plan and order stock. All in one tool.

AGR, the trusted inventory management software for over 25 years. Our cloud-based solution takes away the manual and time-consuming tasks to give you back time in the day.

Precise Forecasts

State-of-the-art forecasting engine that provides item level insights for future inventory levels.

Demand Planning

Meet customer demand by planning cross-functionally in one space and plan at the customer level.

Automate Orders

Schedule reoccurring orders and get optimised order proposals using ABC inventory analysis.

Instant Reports

Access powerful inventory reports updated automatically with your latest ERP data.

Why AGR?

Our demand planning, forecasting and replenishment software is created for SMB's. We integrate with your ERP and centralise your key data in one place. With built-in inventory reports and item-level insights, you get a clear, actionable view of your data to make smarter replenishment decisions.

Dedicated customer success team with frequent training seminars.

Full access to new functionality included in your subscription.

Go live in just 7 days with our standard ERP connectors.

Leading inventory management features to support business growth.
