AGR is a leader in inventory optimisation software. With over 30 years of experience increasing the value of ERP data through ML demand forecasting and order proposals. Designed for SMBs in wholesale, distribution and retail, we typically get customers up and running in days. We have a 92% retention rate and a customer success team beside our customers to ensure their success and growth initiatives.

Why Customers Choose AGR?

- Struggles with forecasting more specifically for seasonal product data
- Overstocking their inventory due to uncertainty which affects their working capital and reduces profitability
- Unpredictable lead times creates lost sales and unsatisfied customers
- Inefficient ordering processes

Key Features

- Advanced forecasting algorithms detecting seasonality, trends, spikes etc.
- Advanced configurable Safety Stock Engine
- Automated order proposals and scheduler
- Sales and operational planning - including customer level planning

Additional benefits

- Customer support in multiple languages
- Advanced AGR knowledge base and monthly live trainings
- Modular and scalable solution
